

S2000 set init

Install the board in your game, leave the door open, turn on game power.

When you install your board in your game and power up you will get an immediate "call attendant" message.

When you see that message, Don't panic, turn the jackpot reset key on the side of the game one time.

Another error message will appear and a warning deee dooo.. sound can be heard.

Don't panic, turn the jackpot reset again.

There will be a third message, it could be another alarm that you clear with the jackpot reset key.

It could also be a message telling you to hold the self test button in for seconds.

The Self Test button is on the computer board tray, right next to the small lamps.

Once you close the door, as instructed, the game will initialize and be ready to play.
